My Paragraph

- This is creative thinking because I used creative aspects to taking this photo by looking up and changing the tools and effect on the camera. This related with creative thinking because it's a different kind of creative thinking that is unique and still means the same thing. I can improve this by being more creative maybe doing a different angle different point of view, maybe add a frame, edit it better or anything you can always be more creative. Core competencies relate to a lot of things in life There's so much more around them than just the basics things we know and they are very helpful in life because they make you who you are.

PE

My paragraph

- This is Communication because a lot of PE is about teamwork and you need a lot of communication passing, shooting and talking. If there was no communication then your team would do bad with communication you can do so much better and communication is very important in life for everything and if we had no communication the world would be bad, and nobody would talk, and it wouldn't be fun. You can improve in communication because you can talk more which will make your team better and if you have a question in math and you don't talk then you will never learn but if you use more communication everything will be easier and better. This is very important skill to have for lots of things in the world such as, sports, school, friends etc.

Art.

My paragraph

- This is critical thinking because I'm using my brain to make sure the drawing is perfect making sure it's all lined up everything is colored. I can be more critical thinking by adding new features to my drawing or making a line different changing the face around. There's so many things you can do to be more of a critical thinker a lot of things you do in your daily life relate to be a critical thinker that people don't even notice it's crazy how many of these core competencies are in our daily lives and how much we use them.
