## Self-Reflection

How does the artifact you selected demonstrate strengths & growth in the communication competency?

In what ways might you further develop your communication competency?

Meeting more together might develop my communication competency. One of my group members didn't had much time to meet together after schools and on the weekends, so we chose to finish much as we can at lunch time and in class time. Also, fortunately, my other group member had some time, so we could finished some decorations and making some rooms, but we couldn't make many furniture as the floor plan.

How does the artifact you selected demonstrate strengths & growth in the thinking competencies?

In what ways might you further develop your thinking competencies?

If we had a bigger shoe box, or didn't had to make the house inside of the shoe box, it might develop my thinking competencies. I know it might be easier to bring the project home and work on it, but it was complicated to make a tiny furnitures and way more smaller circuits than I've expected for my room plan. We had to change some floor plan; remove the yard and some other rooms we had in our house. We might had complex circuit too if we didn't had to remove and change some floor plans, or if we had larger box to work on.

How does the artifact you selected demonstrate strengths & growth in the personal & social competencies?

In what ways might you further develop your personal & social competencies?

Like I said on demonstrating strengths and growth in the thinking competencies, we might have created a complex circuit too, and meeting more to work on the project or talking about the project more, which might develop my personal and social competencies. For the switch in my parallel circuit (kitchen and front door), I tried to make it easier to turn the switch on and off, so I put the switch nearest to the front door, and the other switch nearest to the center of the house, which makes people not go through the darkness to turn the switch on. Also, it is in parallel circuit instead of series circuit, so it doesn't turn off the other lights in other room at the same time if you turn off the switch, and save more electricity.
