

App name: Complete Chemistry

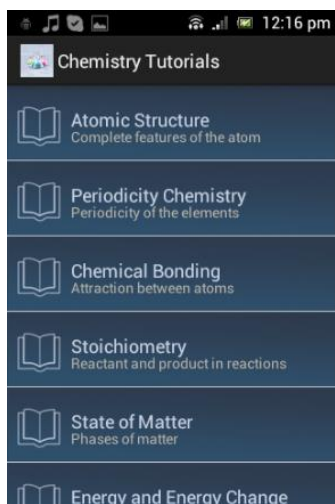

App review questions

1. Where does the app exceed.
2. How it shows chemistry fully.
3. Why it is a good study tool.
4. Why people of all ages should have it
5. What age it speaks to the most
6. How detailed is it
7. Should teachers use it as a teaching tool
8. How many parts of science does it cover

The app I believe exceeds its organizational capabilities, it has everything you need in a few taps and it has it categorized very well for example, if you wanted to learn about the atomic structure you could simply go to the category marked "Formulas" and then "Atomic Structure". This app has everything you need on chemistry and I mean everything, it ranges from tutorials on how to use the app and tutorials on chemistry itself to quizzes you can do to test if you actually understand some things. If you are learning something in chemistry you can go on this app and use it as a study tool, for example, use the quizzes to see if you understand what has been taught and use the scientific calculator they have installed to help you with your homework.

Teachers would love this app because they could use it as a study tool, they could use it to explain the "Gas Laws" and "Polyatomic Ions". People of all ages should have it because for scientists or professionals of science could get more into the complicated stuff the app has such as the structures and kids should have it more the simpler functions. The age the app speaks to the most would have to be the middle age meaning the 30-50 year olds because they would be old enough to understand the simpler as well as the more complicated functions of the app. The app is quite detailed if you simply look at the chemistry tutorials you can tell just by that it is quite complicated if you don't believe me take a look for yourself.

Sadly the only part of science this app explains is the chemistrial part but it explains it so well that there is really nothing to complain about. To recap we know this app is good for people of all ages but better for the people in the middle age class, it is good for teachers to teach with and students to study with, it is very organized and shows chemistry to its fullest. It is the most detailed chemistry app available in my opinion. Also it is good for studying because of its tutorial and quiz abilities.
