Privacy (my definition) - is when you are completely secure from the people of the outside world

Privacy (dictionary definition) - the state or condition of being free from being observed or disturbed by other people.

- The state of being free from public attention

"Privacy is a place of seclusion"

"Freedom from unauthorized intrusion"

Privacy

"The quality or state of being apart from company or observation"

"What are the most important privacy-related issues in today's society?"

I believe the most privacy related issues today are people accessing sites they don't know and then they get viruses installed on their devices from the site that they have entered, so I believe that people need to be more careful and alert about what they access on the internet as well as people are finding new ways to hack into phones and devices through passwords.
