CWRASYP Fall Term Speaker Series

**The modern hydrologist's
toolbox: doing science with
binoculars, a statistics book,
a pair of rubber boots and a
laptop**

Promoting Effective Water Management

The discipline of Hydrology is modernizing itself not only through the methods and techniques it is adopting but also through the way it is training the new generation of Hydrologists. Rather than asking for strict experimentalists, modellers or theoreticians, both Academia and Industry are now looking for skilled individuals who can conceptualize, classify, measure and model watershed behaviours. This talk will explore the benefits but also potential pitfalls of doing all at once, i.e., juggling with hydrological theories, data, instruments and models at the same time.

Come join the CWRA SYP Manitoba Branch to learn about the challenges faced by hydrologist through their multifaceted approaches to understanding watersheds.

Free pizza will be provided for those who register for the event

Guest Speaker:

Dr. Genevieve Ali, BSc Hons, PhD

Junior Chair, Watershed Systems Research Program
Assistant Professor, Department of Geological Sciences
University of Manitoba

CWRASYP MANITOBA BRANCH EXECUTIVE

Aaron Smith Team Leader
Mitchel Peters Education Officer
